

What I Learned:

Amazon Future Engineer is a program run by Amazon for the easy and wide access to the computer science education for communities with less reach to such education.

Currently the program is offering scholarships up to \$10,000/year for undergrad degree in Computer Science. The program is also widening its scope towards Elementary schools and have opened sponsorship applications for Middle and High School curriculum and teacher professional development in the US.

In Robotics Section, Amazon has *Virtual Robot Challenge* where students from grade 4 and above can participate and win up to \$250 in classroom supplies. The guides for this challenge will also be available through Amazon's Scholarship winners.

In addition to the Cyber Robotics Challenge, Amazon Future Engineers program offers free of cost access to the CoderZ's virtual Robotics Learning modules.

What I Did Not Learn:

How a Data Science relates to the Robotics course?
